RAYMARINE .FSH FILE TRANSFER TO E-SERIES RAYMARINE GPS UNIT USING SD CARD

FIRST THINGS FIRST, BE SURE YOU HAVE COPIED YOUR .FSH WAYPOINT FILE TO A BLANK SD-MICRO SD CARD FOR THIS SIMPLE PROCEDURE. DO THIS FIRST.

Transferring GPS Fishing Spots to Raymarine E-Series Multi-Function Display (MFD)  
USE THE .FSH FILE WE EMAILED TO YOU FOR THIS PROCESS

The following procedure may be used to retrieve waypoint, route, and track data which has been saved within an archive.fsh file which has been saved onto a microSD memory card:

1. place the microSD memory card containing the archive.fsh file into the a/c/e-Series MFD's memory card reader's upper slot
2. press the HOME button
3. select the MY DATA function
4. select RETRIEVE FROM CARD list option
5. select SD1 within the Select External Storage dialog
6. select the RETRIEVE WAYPOINTS list option
7. select the RETRIEVE ALL option
8. select OK within the Card In Use dialog
9. select the RETRIEVE ROUTES list option
10. select the RETRIEVE ALL option
11. select OK within the Card In Use dialog
12. select the RETRIEVE TRACKS list option
13. select the RETRIEVE ALL option
14. select OK within the Card In Use dialog
15. press the BACK button
16. select EJECT CARD
17. select SD1
18. when the dialog indicates that it is safe to remove the microSD memory card, remove the microSD memory card from the upper memory card slot of the memory card reader
19. select OK

If you cannot complete this process for any reason, please contact Raymarine Customer Support. Have your Model and Serial Number(s) written down and ready for this call. The file you have been sent is the proper type of file for a Raymarine E-Series MFD. Raymarine Customer Support: Tel: (+1) 603 324 7900
